360° antivirus.

Protection against crippling attacks that's always up-to-date. Bechtle 360° antivirus monitors your clients via a central server and actively monitors them. If an infected file is identified, an alert feature sends a message with the relevant virus information to the Service Desk so that they can respond as the situation requires.

Reduce your administrative work with 360° antivirus and benefit from the highest level of virus protection. Installation of the antivirus client on your end device is quick and simple, and does not require any complex settings. From the moment we load the installation files onto your system, your PC or notebook is protected from viruses, worms, and more.

❚ Monitoring of client in line with compatibility lists
❚ Monitoring of viruses and other pests
❚ Virus protection always up-to-date
❚ Maximum protection against all kinds of threats
❚ Professional support from the Service Desk
❚ Active monitoring of the service
❚ If you find a definition of a virus that is out of date: report it immediately to the Service Desk
❚ More time for your core activities

Viruses, trojans, and worms are the most well-known terms in the context of IT security. Only up-to-date virus protection can provide optimum defence against new types of malware.
